Seed Likes

Description

This dream is for Preparation of ECAT, offered by the University of Engineering & Technology, Lahore.

☒ Featured
 ☐ Default Dream
 ☒ Publish

Create a new dream and name it as "ECAT", add tags if you want to, give seed likes, Select Media Image, Check the Publish Check Box and Click "Save" Button in the bottom to Save the dream. After saving, ECAT will be visible in the left dream list as shown in the image below.

Step 2 : Add Pages to Sample Dream

Click on the dream name "ECAT" from list to add dream pages and click on the "Pages" Tab to add pages into the dream.

Enter Name, Check "Public Default" check box, check "Published" checkbox, take mouse above the "Page Roles" button, select Anonymous Role, and Click on the "Add" button to add the page into the dream. Selecting Public Default means that this page will be visible to public and selecting "Published" means the page is published and visible. After adding the page, the screen shall look like the following.

[illegible]

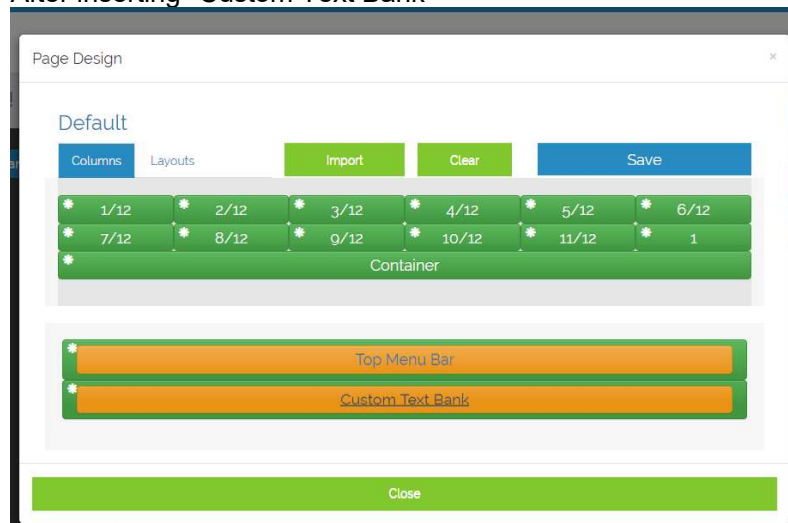

Step 3: Add content into page from page builder.

Click on the Page Name from page list and following popup window will appear. Start by dragging layout elements into content area.

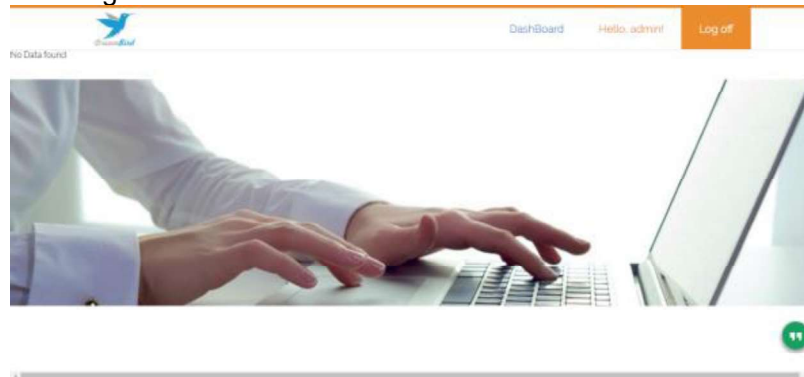

Drag a "Container" column into content area, click on the (+) sign from extreme right of the column, and select "Top Menu Bar" to add it into the page builder, click on blue "Save" button. Now the screen should look like the following image.

Now we will add a banner image for dream. Drag a "1" column, change its padding to "0" and give class "main_image_gre" from CSS Editor (Procedure Explained earlier in "Creation of Default Dream and Home Page" tutorial) and save it. Now from the (+) sign, add "Custom Text Bank", Click Save. The screen should look like the following.

After inserting "Custom Text Bank"

Now click on the Page name in the page builder and you should see the rendered page in the new tab, that should look like the following

Now, go back to the page builder, Click on the Blue colored Link "Custom Text Bank" and you should see the following screen.

Note that the added control will be initially hidden and upon scrolling it will be visible one by one. Now we shall add a news ticker for the dream. The control is in the process of build and will be available shortly. For now, it will be added through the markup. To do this, go to page builder, and just below the dream enrollment component add another "Custom Text Bank" and add the following markup in the text bank content area.

```
<div class="panel panel-default hideme"
style="font-size:16px;">
    <!-- Default
    panel contents -->
    <div
class="panel-heading">Related News</div>
    <!-- List group
-->
    <div
class="panel-body">
        <div
id="dream_news" style="min-height: 56px;">
            <ul>
                <li>
                    <div class="col-md-12" style="padding:0;
```

Your Comments Here

```

background-color: #e6e6e6; margin-top: 5px;
margin-bottom: 5px;">
        <div class="col-md-2" style="padding:
0">

        </div>

        <div class="col-md-10" style=" height:
53px;">

            <a href="#" target="_blank">UET
to Hold Entry Test on 28-September, 2016</a>

        </div>

    </div>

</li>

<li>

    <div class="col-md-12" style="padding:0;
background-color: #e6e6e6; margin-top: 5px;
margin-bottom: 5px;">

        <div class="col-md-2" style="padding:
0">

        </div>

        <div class="col-md-10" style=" height:
53px;">

            <a href="#" target="_blank">MCAT
to be held on December 15th, 2016</a>

        </div>

    </div>

</li>

</ul>
</div>
<div
class="panel-footer">

        <button
class="btn btn-warning">View More</button>

```

Your Comments Here

```
</div>
</div>
```

Now edit the `<script> ... </script>` code of the previously added text bank that shows the dream features and change it to the following.

```
<script type="text/javascript">
    jQuery(document).ready(function($) {
        $('#dream_news').vTicker('init',
        {
            height: 56,
            showItems: 2,
            padding:4});
        $(window).scroll(function() {

            $('.hideme').each(function() {
                var bottom =
$(this).offset().top + $(this).outerHeight();
                var WindowBottom =
$(window).scrollTop() + $(window).height();
                if(WindowBottom >
bottom)

                {

                    $(this).animate({'opacity':'1'}, 500);
                }
            });
        });
    });
</script>
```

Now we'll have to upload external javascript file into the system. To do this, go to File Bank (Process explained in the introduction to file bank), upload the file `"jquery.vticker.min.js"`, click on the file thumb and copy the file path that will appear in the alert box. And paste it inside the `"src"` attribute in the mentioned below format. Not that `../..` is for root directories according to the conventions of JavaScript referencing.

```
<script type="text/javascript"
src="../../Content/js/jquery.vticker.min.js"></sc
ript>
```

Now, save the text bank, close the text bank, open the admin page of the "News Ticker" custom text bank, edit the images by selecting them from media bank, save the custom text bank and upon saving, the page should look like the following.
