

Refer to the snap on the previous page, and take mouse pointer to the right side of the layout item and you shall see that three signs appear when mouse is dragged over them. Cross sign works as remove tool. It means that when user clicks on the cross sign, the layout item will be removed, when user clicks on Plus sign (+), he will be shown the following popup panel. This popup panel shall contain all the components that could be used in the layout. Description is given as under.

This list will show the categories of the controls. Clicking on one of these categories will show the controls in grid form on the right.

Clicking on the Component shall add the component into the layout. image given below. here it can be seen that the component has been added into the layout. Multiple components could be added into one layout column, it may be noted that items are not draggable to other columns. if user wants to shift the component into another column, then he may delete the component from cross sign appearing on the top right corner when mouse pointer is moved there and then click on the plus sign of other column to add the component by selecting following the procedure elaborated above.
